PROFESSIONAL SUMMARY

Technical Project Manager with 3+ years leading enterprise SaaS onboarding across logistics, AI commerce, and B2B platforms. Own the full merchant journey - **technical discovery, solution design, API and data-mapping configuration, testing, and launch** for workflow-heavy platforms in operationally complex environments. Background spans 3PL and dispatch operations, AI-native agentic commerce with virtual try-on and recommendation systems, and multi-tenant enterprise platforms. Translate technical requirements for non-technical merchant stakeholders and drive fast, confident adoption.

EXPERIENCE

Technical Project Manager | [FleetPanda](#)

May 2026 – Present • San Francisco, CA

- Own end-to-end onboarding for **7 enterprise fuel distributor accounts (\$1.5M+ in combined contract value)**, leading technical discovery, solution design, platform configuration, and go-live across dispatch, order management, reconciliation, invoicing, pricing/contract automation, customer portal, and 3PL/multi-business-line workflows.
- Conduct technical discovery with merchant operations, accounting, and IT teams to map existing systems (ERP, accounting, WMS) to FleetPanda, then configure **API connections, integration mappings**, and automated reconciliation to match each distributor's workflows.
- Diagnose and resolve integration issues across data flows analyzing payloads, logs, and system behavior to unblock go-lives within the **6-8 week implementation window**.
- Configure the customizable dispatch dashboard, driver app, same-day billing, and pricing engines per merchant, balancing shared platform systems against distributor-specific requirements.
- Built an **AI-native** implementation ops tool (Followloop) on **Claude API** + webhook triggers that automates post-meeting documentation, escalation-risk classification, and stakeholder status reporting across all active accounts.
- Deliver **enablement and training** for dispatcher, driver, and operations teams including legacy-workflow organizations with minimal technical staff maintaining high on-schedule delivery across simultaneous implementations.

Technical Product Manager | [fAlshion Inc.](#)

Jul 2025 – Oct 2025 • San Francisco, CA

- Led end-to-end implementation of an AI-native agentic shopping experience - configuring **virtual try-on, sizing/fit guidance, outfit-building, and mix-and-match recommendation** flows that took shoppers from discovery to conversion.
- Onboarded enterprise retail (B2B) partners: ran technical discovery on product catalogs, SKU/sizing data formats, and **storefront API requirements**, then configured catalog integrations and conversational agent workflows per merchant.
- Built **first-party interaction data capture** and an agent evaluation framework (task completion, drop-offs, latency, accuracy) - improving first-try resolution **22%** and cutting failed responses **27%**.
- Diagnosed integration and agent-pipeline failures (intent misclassification, catalog mismatch, fallback errors), raising successful task completion from **62% to 81%** and **reducing return-driving sizing errors** through better fit guidance.

Senior Technical Project Manager | [WPCreative](#)

Apr 2022 – Dec 2023 • Remote

- Managed platform onboarding and feature implementation across **30+ enterprise and SMB clients** on a B2B SaaS MarTech platform, aligning **merchant-specific workflow requirements** with shared configurable platform systems.
- Led technical discovery and integration work for **18 enterprise client websites** - diagnosing performance issues (reduced page load from 8s to 2.5s), configuring CMS workflows, and **validating API-driven** marketing automation pipelines.
- Built real-time analytics dashboards using Metabase and Power BI to surface onboarding health, campaign performance, and integration anomalies reducing detection time from **5 days to under 24 hours** and preventing **\$50K/month** in ad waste.
- Drove **22–39%** engagement improvements across onboarding and core usage flows for a platform with **50K+ MAUs** and **\$600K+ monthly revenue** by identifying friction through 35+ customer interviews and iterating rapidly on activation sequences.
- Established QA checklists, release gates, and regression test protocols that reduced launch defects by **32%** and maintained **96% on-schedule delivery** across 4 major release cycles.

Associate Technical Project Manager | [Hazesoft](#)

May 2021 – Mar 2022 • Nepal

- Supported **onboarding of enterprise clients** onto a cloud SaaS platform refining user flow, **configuring deployment workflows**, and coordinating cross-functional delivery across DevOps, data engineering, and QA teams.
- Reduced deployment time from **4 hours to 45 minutes** by introducing automated deployment checks and rollback routines, lowering manual implementation effort by **70%**.
- Drove **15% adoption increase** for a core platform feature by mapping onboarding friction points, aligning engineering communication, and running structured feedback collection with customer-facing teams.

EDUCATION

Master of Science, Computer Science - [San Francisco Bay University](#)

Dec 2025

GPA: 3.8 (Top 5%) • Dean's List • [Winner - "Best Use of Claude" at Cal Hacks 12.0 \(Anthropic\)](#)

SKILLS

Implementation	End-to-end merchant onboarding, technical discovery, API/webhook configuration, data mapping, integration troubleshooting, go-live management
Technical	REST APIs, JSON, HTTP, webhooks, Python, SQL, ClickUp, Shopify ecosystem, Postman, Supabase
Commerce Ops	3PL workflows, order management, returns, dispatch & fulfillment operations, eCommerce platform integrations
Platforms	Claude API, OpenAI API, Gemini API, Hugging face Models, Metabases, Power BI, Jira, Figma, Slack API, Gmail API
Communication	Translating technical requirements for non-technical merchant stakeholders; enablement training; async cross-team coordination
